

Coronavirus Disease 2019 (COVID-19)

On February 11, 2020 the World Health Organization **announced** an official name for the disease that is causing the current outbreak of coronavirus disease, COVID-19. CDC will be updating our website and other CDC materials to reflect the updated name.

Interim Guidance for Implementing Home Care of People Not Requiring Hospitalization for Coronavirus Disease 2019 (COVID-19)

Updated February 12, 2020

[Printer friendly version](#)  [\[PDF\]](#)

This interim guidance is for staff at local and state health departments, infection prevention and control professionals and healthcare personnel who are coordinating the home care and isolation¹ of people with confirmed or suspected COVID-19 infection, including persons under investigation (see [Criteria to Guide Evaluation of Persons Under Investigation \(PUI\) for COVID-19](#)). This includes patients evaluated in an outpatient setting who do not require hospitalization (i.e., patients who are medically stable and can receive care at home) or patients who are discharged home following a hospitalization with confirmed COVID-19 infection.

In general, people should adhere to home isolation until the risk of secondary transmission is thought to be low. Preventing the [Spread of Coronavirus Disease 2019 in Homes and Residential Communities](#) page for more information.

Preventing COVID-19 from Spreading in Homes and Communities: Interim guidance that may help prevent COVID-19 from spreading among people in homes and in communities.

This document does not apply to patients in healthcare settings. For interim healthcare infection prevention and control recommendations, see [Interim Infection Prevention and Control Recommendations for Patients with Known or Suspected COVID-19 Under Investigation for Coronavirus Disease 2019 \(COVID-19\) in a Healthcare Setting](#). CDC will update this interim guidance as needed and as more information becomes available.

Assess the Suitability of the Residential Setting for Home Care

In consultation with state or local health department staff, a healthcare professional should assess whether the residential setting is appropriate for home care. Considerations for care at home include whether:

- The patient is stable enough to receive care at home.
- Appropriate caregivers are available at home.
- There is a separate bedroom where the patient can recover without sharing immediate space with others.
- Resources for access to food and other necessities are available.

- The patient and other household members have access to appropriate, recommended personal protective equipment (at a minimum, gloves and facemask) and are capable of adhering to precautions recommended for home care or isolation (e.g., respiratory hygiene and cough etiquette, hand hygiene);
- There are household members who may be at increased risk of complications from COVID-19 infection (e.g. >65 years old, young children, pregnant women, people who are immunocompromised or who have chronic lung, or kidney conditions).

Provide Guidance for Precautions to Implement during Home Care

A healthcare professional should

- Provide CDC's [Interim Guidance for Preventing Coronavirus Disease 2019 \(COVID-19\) from Spreading to Other Homes and Communities](#) to the patient, caregiver, and household members; and
- Contact their state or local health department to discuss criteria for discontinuing any such measures. Check available hours when contacting local health departments.

Footnotes

¹Isolation is defined as the separation or restriction of activities of an ill person with a contagious disease from those who are well.
